Jupyter Notebook files You can create content with Jupyter notebooks. For example, the content for the current page is

Cold

20

contained in {download}this notebook file <./notebooks.ipynb>.

{margin}

If you'd like to write in plain-text files, but still keep a notebook structure, you Jupyter notebooks with MyST Markdown, which are then automatically converted to notebooks.

See [](./myst-notebooks.md) for more details.

Jupyter Book supports all Markdown that is supported by Jupyter Notebook. This is mostly a flavour

about writing Jupyter-flavoured Markdown in Jupyter Book, see . Code blocks and image outputs

of Markdown called CommonMark Markdown with minor modifications. For more information

Jupyter Book will also embed your code blocks and output in your book. For example, here's some sample Matplotlib code:

```
from matplotlib import rcParams, cycler
     import matplotlib.pyplot as plt
     import numpy as np
[1]: plt.ion()
     <contextlib.ExitStack at 0x22bfe5f6610>
```

```
# Fixing random state for reproducibility
     np.random.seed(19680801)
     N = 10
     data = [np.logspace(0, 1, 100) + np.random.randn(100) + ii for ii in range(N)]
     data = np.array(data).T
     cmap = plt.cm.coolwarm
     rcParams['axes.prop_cycle'] = cycler(color=cmap(np.linspace(0, 1, N)))
     from matplotlib.lines import Line2D
     custom_lines = [Line2D([0], [0], color=cmap(0.), lw=4),
                     Line2D([0], [0], color=cmap(.5), lw=4),
                     Line2D([0], [0], color=cmap(1.), lw=4)]
     fig, ax = plt.subplots(figsize=(10, 5))
     lines = ax.plot(data)
[2]: ax.legend(custom_lines, ['Cold', 'Medium', 'Hot']);
```

```
Medium

                                                                                    100
{margin}
For more information on how to do this,
check out the {ref}`layout/sidebar` section.
Removing content before publishing
You can also remove some content before publishing your book to the web. For reference,
{download}you can download the notebook content for this page <notebooks.ipynb>.
 thisvariable = "none of this should show up in the textbook"
 fig, ax = plt.subplots()
 x = np.random.randn(100)
```

ax.scatter(x, y, s=np.abs(x*100), c=x, cmap=plt.cm.coolwarm)ax.text(0, .5, thisvariable, fontsize=20, transform=ax.transAxes)

none of this should show up in the textbook

You can **remove only the code** so that images and other output still show up.

thisvariable = "this plot *will* show up in the textbook."

ax.scatter(x, y, s=np.abs(x*100), c=x, cmap=plt.cm.coolwarm)ax.text(0, .5, thisvariable, fontsize=20, transform=ax.transAxes)

this plot *will* show up in the textbook.

```
Which works well if you'd like to quickly display cell output without cluttering your content with
    code. This works for any cell output, like a Pandas DataFrame.
      import pandas as pd
      pd.DataFrame([['hi', 'there'], ['this', 'is'], ['a', 'DataFrame']], columns=['Word
[6]: A', 'Word B'])
       Word A
                   Word B
          hi
                    there
                       is
```

See {ref}hiding/remove-content for more information about hiding and removing content.

We can do the same for interactive material. Below we'll display a map using folium. When your

*This will only work for some packages.** They need to be able to output standalone

folium.Marker(location=[45.3288, -121.6625], popup='Mt. Hood Meadows',

book is built, the code for creating the interactive map is retained.

depend on an underlying Python kernel to work.

location=[45.372, -121.6972],

icon=folium.Icon(icon='cloud')

```
folium.Marker(
         location=[45.3311, -121.7113],
         popup='Timberline Lodge',
         icon=folium.Icon(color='green')
     ).add_to(m)
     folium.Marker(
         location=[45.3300, -121.6823],
         popup='Some Other Location',
         icon=folium.Icon(color='red', icon='info-sign')
     ).add_to(m)
[7]: m
     <folium.folium.Map at 0x22bff8ea690>
    Rich outputs from notebook cells
    Because notebooks have rich text outputs, you can store these in your Jupyter Book as well! For
    example, here is the command line help menu, see how it is nicely formatted.
     !jupyter-book build --help
     'jupyter-book' ���O����Y~���R�O�B�i���榛�{���X妸�gC
```

NameError Traceback (most recent call last) Cell In[9], line 1 → 1 this_will_error NameError: name 'this_will_error' is not defined

There are many other features of Jupyter notebooks to take advantage of, such as automatically generating Binder links for notebooks or connecting your content with a kernel in the cloud. For

And here is an error. You can mark notebook cells as "expected to error" by adding a raises-
